

NO HASSLE METER COLLECTION

Trusted print management experts.

BBE Onsite automatically collects your meter readings from your networked printers & MFP's, saving you both time and money.

We eliminate your staff's hassle of monthly meter collections and provide our customers with more precise accounting of your actual volumes to ensure proper invoicing.

As a free added value to our customer's maintenance agreement, we will install BBE Onsite.

How it works

Browser based Microsoft .NET control

BBE Onsite is an intelligent data collection method using Microsoft's .NET (dot net) framework technology. **BBE Onsite** can only pull information from printing devices.

It can not look at any files that reside on the network.

- *At no point in time does your local network become accessible through the internet.*

Discovery Process

BBE Onsite discovers devices by sending out a general broadcast on the local network using SNMP. A highly compacted query is used that filters and optimizes any further network traffic to printers alone. The amount of network traffic is minimal as a result. The information that is collected contains data from printer and MFP devices only, including IP Address, Manufacturer name, Model name, Serial #, Mac Address of print device and various meters of each print device

Minimum Requirements

A server or workstation running the following:

Microsoft Windows XP/2003 server or above

Microsoft 2.0 NET Framework.

IE 7 or above.

23 Meg Hard Disk Space
